- 1. What type of data visualisation is a histogram?
  - a. Scatter plot
  - b. Line chart
  - c. Bar chart
  - d. Frequency distribution
- 2. In a histogram, what is represented on the x-axis?
  - a. Categories
  - b. Frequency
  - c. Percentage
  - d. Range of values
- 3. What is the primary purpose of a histogram?
  - a. Showing proportions
  - b. Displaying trends over time
  - c. Representing categorical data
  - d. Presenting the distribution of numerical data
- 4. How is the number of bins determined in a histogram?
  - a. Subjective choice
  - b. Fixed formula
  - c. Data range
  - d. All of the above
- 5. In a bar chart, what is represented by the length of the bars?
  - a. Frequency
  - b. Percentage
  - c. Range
  - d. Standard deviation
- 6. Which type of data is best represented by a bar chart?
  - a. Numerical
  - b. Categorical
  - c. Time series
  - d. Geospatial
- 7. What is the main difference between a histogram and a bar chart?
  - a. The type of data they represent
  - b. The presence of gaps between bars
  - c. The orientation of the bars
  - d. The number of bars
- 8. What does each slice in a pie chart represent?
  - a. Frequency
  - b. Percentage
  - c. Range
  - d. Standard deviation

- 9. When is it appropriate to use a pie chart?
  a. Showing trends over time
  b. Comparing individual data points
  c. Representing parts of a whole
  d. Displaying geospatial data
- 10. What type of data is commonly visualised using a heatmap?
  - a. Categorical
  - b. Numerical
  - c. Time series
  - d. Geospatial
- 11. In a heatmap, what do the colours represent?
  - a. Frequency
  - b. Intensity or value
  - c. Range
  - d. Standard deviation
- 12. What is a violin plot used for?
  - a. Displaying distribution of numerical data
  - b. Comparing categorical data
  - c. Showing geospatial trends
  - d. Representing time series data
- 13. What does the width of the "violin" in a violin plot indicate?
  - a. Range of values
  - b. Frequency
  - c. Density of data points
  - d. Skewness
- 14. In a skewed right distribution, where is the tail of the data located?
  - a. Left side
  - b. Right side
  - c. Center
  - d. Both sides equally
- 15. What does a negative skewness value indicate?
  - a. Skewed left
  - b. Skewed right
  - c. Symmetric distribution
  - d. No skewness
- 16. In a perfectly symmetrical distribution, what is the skewness value?
  - a. 0
  - b. 1
  - c. -1
  - d. Cannot be determined

- 17. What type of data is best visualised using a dot plot?a. Numericalb. Categorical
  - a Time carios
  - c. Time series
  - d. Geospatial
- 18. How are individual data points represented in a dot plot?
  - a. Bars
  - b. Dots
  - c. Lines
  - d. Areas
- 19. What is the main purpose of a stem-and-leaf plot?
  - a. Displaying distribution of numerical data
  - b. Comparing categorical data
  - c. Showing geospatial trends
  - d. Representing time series data
- 20. In a stem-and-leaf plot, what does the stem represent?
  - a. Individual data points
  - b. Ranges of values
  - c. Frequency
  - d. Skewness

Certainly! Here are questions 21 to 40:

- 21. In a right-skewed distribution, where is the majority of the data located?
  - a. Left side
  - b. Right side
  - c. Center
  - d. Equally distributed on both sides
- 22. What is the primary disadvantage of using a bar chart?
  - a. Difficulty in comparing individual data points
  - b. Limited to categorical data
  - c. Inability to show trends over time
  - d. Not suitable for large datasets
- 23. When should a histogram be preferred over a bar chart?
  - a. When comparing individual data points
  - b. When showing proportions
  - c. When representing parts of a whole
  - d. When displaying the distribution of numerical data
- 24. What type of data is typically suitable for a pie chart?
  - a. Numerical
  - b. Categorical
  - c. Time series

- d. Geospatial
- 25. In a right-skewed distribution, where is the tail of the data located?
  - a. Left side
  - b. Right side
  - c. Center
  - d. Equally distributed on both sides
- 26. What does a negative skewness value indicate?
  - a. Skewed left
  - b. Skewed right
  - c. Symmetric distribution
  - d. No skewness
- 27. When is a bar chart more appropriate than a histogram?
  - a. When comparing individual data points
  - b. When showing proportions
  - c. When representing parts of a whole
  - d. When displaying the distribution of numerical data
- 28. What is the primary purpose of a pie chart?
  - a. Comparing individual data points
  - b. Showing proportions
  - c. Representing trends over time
  - d. Comparing categories
- 29. What is the key difference between a bar chart and a histogram?
  - a. The type of data they represent
  - b. The presence of gaps between bars
  - c. The orientation of the bars
  - d. The number of categories
- 30. In a left-skewed distribution, where is the tail of the data located?
  - a. Left side
  - b. Right side
  - c. Center
  - d. Equally distributed on both sides
- 31. What does a positive skewness value indicate?
  - a. Skewed left
  - b. Skewed right
  - c. Symmetric distribution
  - d. No skewness
- 32. When is a pie chart considered misleading?
  - a. When there are too many categories
  - b. When the data is evenly distributed
  - c. When it represents a small dataset

- d. When comparing individual data points
- 33. What is the primary purpose of a histogram?
  - a. Displaying the distribution of numerical data
  - b. Comparing individual data points
  - c. Representing trends over time
  - d. Comparing categories
- 34. In a right-skewed distribution, where is the majority of the data located?
  - a. Left side
  - b. Right side
  - c. Center
  - d. Equally distributed on both sides
- 35. What is the main drawback of using a pie chart?
  - a. Limited to categorical data
  - b. Difficult to interpret
  - c. Cannot represent percentages
  - d. Not suitable for small datasets
- 36. Which of the following is a characteristic of a left-skewed distribution?
  - a. Median > Mean
  - b. Median < Mean
  - c. Median = Mean
  - d. Median is not affected by skewness
- 37. In a histogram, what is typically shown on the y-axis?
  - a. Categories
  - b. Frequency
  - c. Percentage
  - d. Range of values
- 38. When is it appropriate to use a pie chart?
  - a. Showing proportions
  - b. Comparing individual data points
  - c. Representing trends over time
  - d. Displaying geospatial data
- 39. What is the primary purpose of a histogram?
  - a. Comparing categories
  - b. Showing proportions
  - c. Representing parts of a whole
  - d. Displaying the distribution of numerical data
- 40. What type of data is best represented by a bar chart?
  - a. Numerical
  - b. Categorical
  - c. Time series

## d. Geospatial
